

Room for growth without room for error

With stadiums becoming centers for more and more events, it's important to have security and management systems that can adapt to a variety of configurations. Unlike traditional "bolt-on" security systems that are piecemealed together, Honeywell's CIP suite features an open-architecture design. The result is seamless integration to create a singular, centralized system that can grow and change as your needs change.

Epic performance

Whether it's new construction or retrofitting into an existing building's system, our solutions are compatible with multiple vendors — giving your stadium an efficient, easy-to-use system that can increase production and reduce downtime. Just some of the ways that Honeywell helps to increase stadium performance include:

- A CIP operation intuitive platform that allows for ease-of-use controlling, monitoring and integrating multiple systems throughout your stadium, including HVAC, energy management, perimeter protection, access control and life safety applications
- The ability to link to financial, HR and supply chain communication systems
- Remote monitoring to ensure security as well as workflow and efficient process
- Web-based user interface for efficient operator control
- Easy configuration for different events, reducing the time and manpower needed to set up for each event

The robust offering of our CIP Solutions means that whether it's initial planning and project management, product delivery, post-installation service and support, or just technical assistance at any stage, you've got a single contact and source of accountability at all times — Honeywell. We're available 24/7 through our global response centers or locally with more than 870 offices in more than 100 countries.

Honeywell

Critical Infrastructure Protection

Honeywell

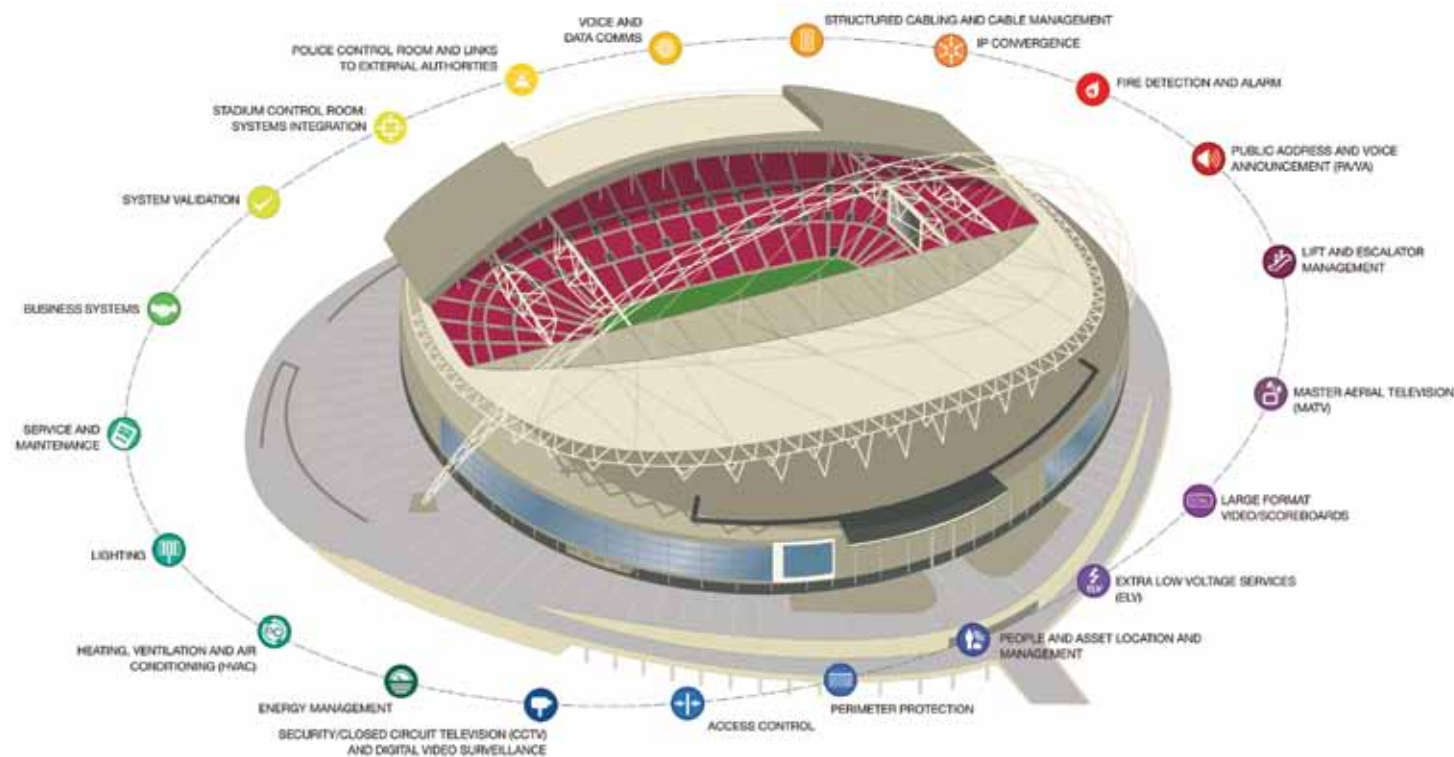

**Securing the guest experience
in stadiums worldwide**

Deliver memorable impressions — not incidents

Today's stadium experience is all about creating lasting memories. With Honeywell's Critical Infrastructure Protection (CIP), you can be confident in delivering a safe and secure venue for your spectators. Blending proven strategies and technology with an integrated, open-architecture design, our solutions deliver not only reliable security measures, but a system that works seamlessly with other enterprise and building management systems. The result is a smoother-running operation and uncompromised protection that your guests won't even know is there.

From Row A to Row Z

Beyond the standard sporting event or concert, today's stadiums are becoming destination venues, attracting the best events while incorporating additional services and amenities to extend entertainment opportunities before and after the event, and beyond. Stadium owners are increasingly developing programs that extend venue operation to 365 days a year. To address these changing needs without detracting from the customer experience, Honeywell CIP Solutions offer true 360-degree protection and system integration. From surveillance and threat prevention to interaction with systems like HVAC, fire systems and video screens, it's technology that delivers the utmost security and control throughout the entire stadium.

Because of the improved information exchange that comes from integrating security with other systems, multiple data points can be collected, deciphered and acted on quicker — helping to improve response times, as well as reduce operating and energy costs with more efficient resource allocation.

Record, review, react

Have an eye in the sky and an ear to the ground at all times. From surveillance to detection, database or alarm solutions, Honeywell's CIP features a number of ways to help secure your stadium outside, inside and everywhere in between. Some of the available tools and technologies include:

Digital video surveillance

- Integration with perimeter motion control
- Identifies security breaches and false alarms
- Event-driven recording and retrieval
- Infrared cameras provide peripheral area visibility in darkness
- Powerful search capabilities and post-event analysis

Crowd control

- Lift and escalator management
- Integration with digital video surveillance
- Swift entry/egress
- Reduce threats and potential loss with people detection
- Decrease capital outlay

Access management

- Authenticate employees, contractors and visitors
- Control access privileges for people and equipment
- Online electric muster stations
- Reception management
- Streamlines process time

In order to maximize the spectator experience and comfort, an effective security system must also be connected to a venue's safety system. Honeywell Fire Systems feature a number of ways to help ensure the safety of your building and occupants including:

- Cutting-edge detection technologies
- Emergency evacuation management
- Regulatory compliance
- Electric mustering

The safest, smartest choice in security

Security is all about minimizing risk. So when it comes to your stadium, why take the chance on any other company? As a \$33 billion diversified technology and manufacturing leader, Honeywell offers an unbeatable combination of service, capabilities, innovative products and a proven track record backed by years of experience in thousands of facilities worldwide. From project design to product delivery and ongoing support, no one is more dedicated to securing your stadium and guest experience.

Because the best offense is a good defense

The spectators in your building rely on security not only for protection, but for prevention. Which is why at Honeywell, our approach starts with a well-proven strategy and intelligent design to help minimize risk from the very beginning. Because if there's one thing our experience implementing security solutions all over the world has taught us, it's that the best way to stop threats is to make sure they never become one. Honeywell CIP Solutions protect your building and guests through:

- Comprehensive vulnerability and threat assessments
- Strategic design and placement of products
- Software development and integration
- Integration of third-party users to include last mile external security information flow
- Requirements definition and system design

Compliance with state and international event operation requirements

Honeywell's CIP has a well-proven track record of delivering operational control that adheres to some of the most stringent local, national and international governmental requirements such as:

- Government compliance – U.K. Green Guide (compliance required for all venues holding more than 500 people)
- FIFA, UEFA, FA (U.K.) and many local country associations
- IOC (International Olympic Committee)
