Honeywell

Honeywell

Government Facility Security Solutions
Worldwide — And World-Class

Flexible for you.
Ironclad everywhere else.

Regulatory mandates, budgetary pressure, technological complexity and very real threats are affecting all government facilities. You need a security solution that is as effective as it is easy-to-use, now and well into the future. Honeywell's Critical Infrastructure Protection (CIP) solutions are built with the technology to minimize risk and neutralize threats, while at the same time scaling to work seamlessly with other enterprise and building management systems. The result is an integrated, strategic approach to security — giving you the peace of mind from a protection system designed specifically for your facility. It's the best of both worlds — all over the world.

Experience on your side

Fancy gadgetry might be where some security companies hang their hat. But at Honeywell, we prefer to match our technology with something more reliable — our experience. It comes from a proven track record of implementing security solutions in more than 5,000 sites and our leadership as the world's largest security products manufacturer. With global reach spanning 870 offices in more than 100 countries, we have delivered products, project engineering, design, construction, commissioning and service worldwide — all while meeting the strictest local and international security standards.

The first line of defense — intelligence

At Honeywell, we believe that the solutions we put in place should be the first and last line of defense in keeping your facility protected. Our well-proven strategies and intelligence keep you informed with critical data — helping to minimize security risks from the very start with:

- Comprehensive vulnerability and threat assessments
- SMART lab simulation and modeling
- Strategic design and placement of products
- Software development and integration
- Requirements definition and system design

Solutions one step ahead

Both technology and security risks are constantly changing. That's why it takes a system that can adapt and grow right along with them. Honeywell uses a scalable, open-architecture design, enabling our offerings to be readily customized and optimized for your specific facility, while also allowing you to expand, upgrade or change our solutions when your needs call for it.

The power of integration

A streamlined process for collecting and distributing data directly affects how quickly a potential threat is detected and addressed. Honeywell's solutions integrate all security applications and subsystems into a single point of data access and distribution, resulting in earlier threat detection, faster incidence response and increased productivity.

Protection from the outside in

Whether it's surveillance, detection, database or alarm solutions, Honeywell's CIP features a robust number of ways to help protect your facility outside, inside and everywhere in between. And the redundant, distributed architecture-based system with easy-to-use operator interface can help minimize both response times and potential threats. Some of the tools we feature include:

OUTER PERIMETER SOLUTIONS

Radar Video Surveillance (RVS)
- Automatic detection, tracking and video response with full field of vision
- Identification of potential threats before reaching perimeter

Sensor technologies
- Microwave, motion, microphonic and electric
- Wide range of detection

INNER PERIMETER SOLUTIONS

Video surveillance
- Thermal and infrared solutions
- Scheduled or event, motion or operator-initiated recordings

Video analytics
- Advanced algorithms alert operators and help mitigate potential threats
- Intelligent video analytics classify threats

Access control
- Biometric readers
- Multi-technology (Smart) cards and access management

In addition, Honeywell Fire Systems feature a number of proven technologies to help ensure the safety of your facility and occupants.

The Honeywell difference

The CIP security solutions from Honeywell involve more than just top-notch products and technology. Our training, support, maintenance and ability to give our customers local service worldwide is what makes the entire experience special. And it's all tailored on an individual basis — making each solution we put in place unique. Just like your needs.

There's only one Honeywell

From project management to construction, design, delivery and service, when you use Honeywell, you've got a single source of accountability on all fronts. Just some of the ways we help to make security easier include:

MAINTENANCE AND SERVICE
- Global service response center with 24/7 access
- Technical assistance centers worldwide
- Extensive service technician network with local support
- Available online service portal
- Upgrades and migration
- Complete lifestyle management

PROJECT MANAGEMENT
- Large network of certified project managers
- Local resources available worldwide
- On-site project management
- Comprehensive training program

The ROI of a security system comes from more than just knowing your facility is adequately protected. With Honeywell's CIP security solutions, you can increase the efficiency of the resources needed to manage, monitor and maintain building systems.

For the ultimate confidence in your facility, Honeywell offers specialty products for your Critical Infrastructure Protection needs.
