Honeywell

a smarter approach to port safety

HEIGHTENING SECURITY WITHOUT SLOWING COMMERCE.

Seaports are a cornerstone of the global economy, transporting goods swiftly and efficiently. Unfortunately, this places seaports high on the list of potential targets. So how can you balance the need for heightened security with the need for fast throughput?

By combining experience with intelligence, Honeywell can help. A trusted name in security and process management for more than half a century, we are setting the standard for seaports all over the world: tighter integration that allows you to work with law enforcement and neighboring facilities.

Honeywell's depth of experience in defense contracting and military-base security gives you the edge that comes with more intelligent systems. And because we are a large global company, you enjoy the peace of mind that comes from working with someone you know will be around tomorrow.

What do your neighbors know?

Good security doesn't happen in a vacuum. That's why Honeywell enables better communication with law enforcement agencies and other properties at your port. With interoperable Honeywell technology, if something looks suspicious, you can easily and quickly alert neighboring properties of a potential problem. And if something does go wrong, your Honeywell system can automatically notify the proper authorities, ensuring a swift response time.

Sharing data at a global level like this integrates islands of information and creates a holistic command and control. So you can heighten security levels and improve operational efficiency at the same time.

Who's on or around your property?

Unlike visitor management systems that are operated by hand—slowly—Honeywell helps you ensure safety and security while keeping pace with the needs of today's economy.

Lobby Works™ for visitor management, for example, reads drivers' licenses, interfaces with background checks, notifies the person being visited, and records information required by federal regulation.

Our perimeter surveillance, asset management, and facilities access control help ensure only authorized people are on your port. Our Radar Video Surveillance (RVS) uses radar and CCTV cameras to detect and track, while our Airborne Information Systems (AIS) identify intruders along the waterside perimeter—all for a low initial investment and life cycle cost. And Vindicator™ Security Solutions incorporate buried, fence-mounted, electric field, microwave, and ground-based sensors to provide heightened perimeter security.

What's happening at your port?

Securing your seaport means more than just controlling access to the property. It should also include constant monitoring of your premises. That's why Pro-Watch™ Security Management allows facilitywide closed-circuit TV and security integration. Asset Locator™ and GPS systems make it easy to continuously track and monitor mobile assets throughout the facility. And our Experion™ Process Knowledge System integrates disparate data across your facility and feeds it all into a unified automation platform. So your port can be more proactive, efficient, and responsive.

Honeywell brings it all together.

Our integrated security, access control, and digital video and monitoring systems minimize the need for separate installations, reduce interface complications, and manage total cost-of-ownership.

Equally important, Honeywell seaport solutions are built on an open platform. So they're easy to implement and simpler to integrate with the systems you already have in place. You'll enjoy lower operating costs. Lower install costs. And increased safety, security, and efficiency. From the trusted name in seaport security.
